What is the value CODE BLUE provides?

With the proliferation of advanced technologies such as IoT, AI, and robotics, our lives are facing many changes. The fusion of cyberspace with physical reality is bringing to life many innovations such as autonomous driving vehicles, remote telemedicine and more. With this change also brings cybersecurity to the forefront and more important than ever it is no longer an issue for engineers alone, but one that society as a whole must address.

CODE BLUE is an international conference bringing together world-class cybersecurity experts. From a vendor-neutral standpoint, the conference aims to share the latest research from prominent researchers in Europe, United States, Japan, and other Asian countries including young and upcoming researchers. Since its inception in 2013, these efforts have earned the trust of the cyber security community at home and abroad.

This year marks the 11th anniversary of CODE BLUE. We aim to offer a valuable experience to all attendees, including exposure to the latest trends and new knowledge in cybersecurity by attending lectures by renowned researchers and being able to network with many industry professionals, including overseas participants visiting Japan.

CODE BLUE 2022 Keynote
Underwhelmed: Making Sense of the Overwhelming Challenge of Cybersecurity

CODE BLUE 2022, Networking party after Talks

Spakers of the past (partial)

2013 Jeff Moss
Founder of BlackHat, DEFCON Organizers

2013 ChrisEagle
a Senior Lecturer at the Naval Postgraduate School (NPS), Dedicated to promoting CTF competitions

2016 Karsten Nohl
2022 Security research known for SIM card hacking, BAD USB, etc.

2017 George Hotz
Known for jailbreaking iOS, Play Station 3, etc.

2018 Mikko Hypponen
Chief Research Officer of F-Secure, One of the security industry's leading opinion leaders

2019 Orange Tsai
2021 Security researcher from Taiwan, world renowned CTF
2022 player, researcher of numerous critical vulnerabilities

2020 Audrey Tang
Digital Minister for Taiwan, encourages software development by citizens.

2021 Akira Saka
CISO, Digital Agency; CISO, Tokyo Organizing Committee for the Olympic and Paralympic Games

2021 Daiyuu Nobori
Developer of SoftEther VPN, Central developer of "Shin Telework System" provided by NTT East and IPA

2022 Neil Wyler
Security expert known as Grifter in the US hacker community like DEFCON and BlackHat
